仰望星空忽然遐想，
何不把現有的
大和欄杆聯在一起，
替我們美麗的月亮
做條腰帶呢！

大和欄杆不驕不傲，
不避酷暑不畏嚴寒，
不怕風吹，不為草動，
默默地、盡職盡責地、
不動搖地挺立著，
為人們站崗，為未來站崗。

FOREWORD

Handrailing, or named Guard-rails, Parapets, Balustrades, Barriers is one security device for protection against accidental fall or accidental access to a hazardous area. It is installed on stairs, step ladders or landings, platforms, sides of bank, pool, pit and walkways. The handrailing shall be installed near to the dangerous areas where is a fall risk of passage through.

There is one type of ball joint handrail, the ball-pipe structure stanchion, combined with rails and toe plates, composing the safety, beautiful and easy erection handrails - DAHE ball joint handrailing.

In October of 1993, DAHE ball joint handrailing was first appeared in Beijing Building Exhibition. In June of 1994, the first batch of DAHE ball joint handrailing was started installation in Guangdong-Shajiao-C Power Station. In September of 1995, DAHE ball joint handrailing was awarded the patent by state. In October of 1998 DAHE has been awarded ISO 9000 QMS certificate.

Over ten years, DAHE handrails was widely used in many industrial areas, municipal engineering, such as power plant, chemical plant, foodstuff and drink plant, water supply and sewage treatment plant, field and park, river bank and dock etc. In recent years, DAHE handrails were supplied for so many power stations throughout China, just like numerous stars twinkling.

Look up stars sky and have a sudden fancy, why not link DAHE handrailing with the moon as make a belt for our beautiful moon.

DAHE handrails Neither arrogant nor proud, neither escape hot summer nor fear cold winter, nor scare wind blow, nor wave as grass bend, but silently, responsibly, stably stand guard for people and stand guard for future. Wish people live longevity and enjoy beauty together though far apart.
